

5GASP Network Applications Community

The goal of 5GASP project is to shorten the idea-to-market process by creating a European testbed for SMEs that is fully automated and self-service to foster rapid development and testing of new and innovative Network Applications built using the 5G NFV based reference architecture.

One of the 5GASP innovative solutions for business is a showcase portal of registered network applications (**Network Applications Store**) providing operational information collected automatically during the Network Applications independent testing on the 5GASP platform. The Network Applications Store is complemented by the **Network Applications Community** portal supporting Network Applications developers and users. Our 5GASP's Community Portal is now online: <https://community.5gasp.eu/>.

This Portal aims to bring the 5G community closer to the 5GASP project by providing state-of-the-art tools for test deployment, test automation, continuous integration, and monitoring of testbeds. The Portal comprises a knowledge center, several tutorials and workshops, Network Applications case studies, and so much more.

5GASP project aims to involve a big number of more interested organizations to become a full member of 5GASP Network Applications community (<https://community.5gasp.eu/index.php/members/>). For educational purposes and to convey to everyone information about 5G, novel use cases, Network Applications concept, modern communication techniques and other relevant to Network Applications development, testing and validation information by the consortium members were recorded short educational videos (<https://community.5gasp.eu/index.php/multimedia/>). And continuing this the 5GASP webinar series will take place. The first and second event is scheduled for 13th and 27th October, respectively.

The first online webinar will discuss the newest advancements and opportunities brought by 5G. Registration is available at <https://www.eventbrite.fr/e/5g-technology-updates-opportunities-tickets-174198210537>.

Also, you can find out more details regarding the milestones of the project, its timeline and the members involved at: <https://5gasp.eu/>.

Do not miss the opportunity to engage with the 5GASP project.
