

5G Network Applications Lab

5GASP strives to achieve a long-term goal: the development of a self-sustainable community of 5G researchers, developers, and vertical end-users that can disseminate knowledge about I) how to develop Network Applications, II) how to test them under close-to-real conditions; and III) how to certify their Network Applications before the latter finally reach their targeted Network Operators and/or Vertical industry customers.

Our goal is indeed quite ambitious, but at the same time, it is *pragmatic* with respect to identifying, building, testing and validating a critical mass of technological components and optimal architecture designs, which can become blueprints for Network Application developers.

To support Network Application developers with their initiatives was launched the [5G Network Application Lab Accelerator](#).

The *5G Network Application Lab accelerator* is delivered by the Horizon 2020 [5GASP](#) project, with the aim to enable SMEs, start-ups and individuals to develop, test and validate 5G-based Network Applications for various business verticals, and to create a *community of developers* and vertical end-users around the 5GASP Platform in order to maximize the potential to create successful commercial products or services.

5G Network Application Lab supports startups, SMEs, developers and researchers that wish to design and deliver valuable 5G products and services, leveraging the native 5G technology capabilities.

Selected teams will get support from mentors with diverse expertise in designing, developing, testing & validating, and promoting 5G network solutions. Thus, they will get to:

- Test and validate your product in real-life scenarios and on real-life 5G testbeds;
- Integrate the latest tools and platforms that support continuous integration & delivery;
- Get feedback on improving your business model and value proposition for the end-users;
- Gain visibility towards investors and social media.

Our first 5G Network Application Lab Event took place on 19th of May 2022. It gave the possibility to learn how the program and the 5GASP ecosystem can support Network Application developers. There were a lot of interesting presentations, Network Application developers pitches, questions and other relevant and helpful information.

All the videos from the event are available on our [YouTube channel](#).

Do not miss the opportunity to engage with the 5G Network Application Lab Accelerator and 5GASP project!

[Apply now to participate in the program](#) and join our [Network Application Community](#)!
